

Mechanical seal ultrasonic cleaning

Ultrasonic plant for mechanical seal cleaning

Following lapping stage, graphite or ceramic mechanical seals must be perfectly degreased.

Cleaning cycle is established depending on type of base material: graphite or ceramic or both of them simultaneously and on whether lapping has been performed in oil or water.

Size and quantity of parts to be treated is to be considered to define type of plant and cycle.

Our technicians are at your disposal to find a solution to whatever cleaning problem you may have.
